Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-9005

Comment on FR Doc # 2025-02305

Submitter Information

Name: Brent Marnati

Address: United States,

General Comment

Firstly, my ability to fully utilize AI assistants in ways I find most beneficial is significantly hampered by copyright restrictions. However, I strongly oppose any formal exemption for OpenAI and Google from these restrictions. Such an exemption would fundamentally undermine copyright principles.

Allowing corporations that aggressively protect their own intellectual property to freely exploit the work of others is inherently unjust. This would exacerbate the existing power imbalance, further shifting our society towards prioritizing corporate interests over those of individuals.

The opaque nature of AI model training makes this issue particularly concerning. This exemption could represent a point of no return, effectively granting these corporations unchecked control over creative output.

My concern isn't a dystopian fear of AI overlords. Rather, it's the certainty that this would accelerate the erosion of human creative agency. We would be handing control of creative endeavors to corporations, built upon the intellectual labor they appropriate, prioritizing profit over societal benefit.

Furthermore, regarding national security, it's well-established that many corporations seeking this access are international in practice, if not in formal registration. Granting them such permissions directly contradicts the goal of enhancing national security. This is particularly concerning given the potential conflicts of interest within the current administration and its advisory team, including individuals like Elon Musk.
