General Comment

Speaking as someone deeply invested in the development of technology, removing regulations set in place for Artificial Intelligence technology is a horrible decision for the future of this country. AI companies and their technology routinely steal the intellectual property of American artists, writers, and other creatives to train their models. Removing these "guardrails" would allow these organizations to continue to infringe on people's copyrights without consequence. AI technology is also capable of creating deep fakes and generated imagery that is increasingly indistinguishable from real life, and allowing this technology to develop freely would make way for more and more irresponsible uses, such as the spread of misinformation and disinformation. In recent history, tech companies routinely go all-in on products or systems that do not benefit the general public and often serve as a waste of funding and resources. Cryptocurrency, NFTs, and now AI. But this new "technology" is not just a waste of resources and taxpayer money, but a plight for the free-thinking people of America.
