## General Comment

We need to ensure that ai software does not take the place of human decision . makers and established constitutional processes. AI have no moral or ethical constraints and could be programmed to act so as to cause harm to actual persons. Liability for such an eventuality could require resolution through lengthy court processes at immense cost to taxpayers. AI must be carefully cultivated by independent, ethical contractors with careful oversight by an accountable committee with authority to stop, delay, edit, and/or cancel those parts of the program set that may fail to meet legal and ethical standards. Isaac Asimov sought to identify and explore some of these issues with his series of stories compiled as I, Robot, et seq. We have an opportunity to consider such a path but must concurrently plan for vast economic upheaval our current sociopolitical system is unequipped to manage.
