General Comment

AI does not and should not have a place in the future of the US. AI companies/AI-affiliated organizations should be held to the rules of the land and not get a special carve out for harming Americans and their works. AI is purely hype and ultimately not necessary for the future of US interests. The environmental costs are also an issue, namely with energy usage. AI threatens the livelihoods of creatives/creative industries, which have been in peril due to issues including the use of AI being favored over human artists. AI also assists in fabricating information, including but not limited to deepfake child pornography and false documentation, deceiving the general populace.
