General Comment

There needs to be more guard rails, not less when it comes to AI. While I feel there are good uses for it, such as the use of iterative AI in regards to medical diagnoses or astronomy, simply letting OpenAI and ChatGPT have free reign to feed into the wood chipper any copyrighted material is wrong. For a company that complained so much that the Chinese stole their product it is rich that they are begging to be allowed to steal people's art, writing, music, likenesses, even their voice to be able to feed the beast and boost their profit. We will not see security, we will not see innovation, instead we will watch a culture created algorithmically become meaningless, we will see harmful treatment of people from decisions never made by a machine, and we will see the amplification of worst of our natures if AI is allowed to grow unchecked and unregulated.
