General Comment

The so-called "AI" that we all know this is referring to (e.g. Large Language Models) is nothing more than a VERY expensive and flashy parlor trick. It would be a waste of time and resources for the nation to invest in it. By its very nature, it is fundamentally UNRELIABLE for information, and its usage for other kinds of media, outside of completely frivolous uses, is invariably a sign of mismanagement and shoddy products. The USA does not need to make itself look WORSE, by using AI junk. Especially in something as important as security, it would only cause terrible damage.
