General Comment

I do not at all believe that it should be legal for companies like OpenAI to take copyrighted works and use it for their own profit. Even if AI companies claim that they do not directly infringe on copyright, how can that be true when tools like ChatGPT can spit out paragraph after paragraph of material to the letter when it is given a prompt to recite copyrighted works? AI is clearly stealing and abusing material that ought to be under protection.

AI steals from common people who simply create their own works, and OpenAI, the biggest AI company to date, can't even make a profit with the amount of theft they currently perform. The work that they do is not fiscally sustainable, ergo I see no need to give their industry such a big pass when it comes to stealing the work of others. I do not believe that their industry will materially benefit the public in the future, and so I vehemently disagree with any motion to protect AI companies from copyright lawsuits.
