General Comment

GenAI would irreparably damage the world of creativity by recycling what we already have instead of seeking to create new thoughts or ideas. It only seeks to rip off what has already been made, not put any unique twist or perspective shift, and regurgitate what it thinks is "new art". AI does not have the heart and soul of a human that can understand and grow and change. Art is beautiful because it is based upon our experiences and imagination. AI only grabs images and words and smashes them into what can only be described as an amalgamation of misconstrued lines and colors. I firmly disagree with allowing AI to train on copyrighted works.
