General Comment

Machine learning models (aka "A.I.") is a limited technology that can only function with large ammounts of data.

This proposed action plan is falsely framed as "removing legal roadblocks" to benefit our country. In reality it is an attempt allow private enterprises to bypass existing copyright laws to acquire the massive amounts of data and intellectual property to use in their machine learning models, but without the permission of or compensation to the citizens and businesses who are the legal owners of that data and intellectual property that are currently protected under existing copyright law.

In short - the A.I. companies are on the precipice of failure and they need to steal in order to stay afloat. This is not actually a mandate to improve machine learning, it is a mandate to use data without paying for it, forever.

A company that needs to steal in order to stay profitable is a company that should not exist.

I am an artist, writer, copyright holder and US Citizen and I do not approve of this proposal.
