General Comment

The system currently being advertised as "artificial intelligence" is little more than aggregation of statistical data. This system does not know or understand any of what it outputs, and it certainly does not know how to think. This is not an "artificial intelligence" system, but a system blatantly based around the theft and distribution of content created without the consent or copyright of the people actually responsible for the works that is fed into it. These regulations must not be lifted, as they are a flagrant misuse of the assets of hard-working people the world over, including the American people, who frown on this system and everything that it stands for. The only people who stand to gain from the removal of these regulations are the people who have stake in it, people who have lied their way to the top by claiming that theft is legal if they have the money behind them to make it so. Uphold these regulations, and let us distance ourselves as a nation from these criminals claiming to be entrepreneurs.
