General Comment

It's my belief that the sourcing of (human-made) works by artificial intelligence freely and without the crediting of the creators of those original works is not only artistically and morally indecent, but seemingly a legal nonissue. Why this is a discussion genuinely confounds me. The open theft on which generative artificial intelligence is based seems quite clearly a breach of the most basic of ownership laws.

Couple this indecency with the catastrophic toll on the environment that AI-use projects, as well as the culture of fraudster behavior that perpetuates much of the AI community and it seems the responsible thing to curtail any advances in this respect.
