General Comment

Any AI policy needs to take into account the consent of the people whose content is taken into any AI system. In short, the "human flourishing" aspect will not happen if AI companies are given the right to scrape and process and use content online or offline without limit, because it will both discourage people from creating things as well as put artists and writers who depend on creating written and visual works out of work. Government restrictions and oversight are not overly burdensome, but rather the best way to make sure that the interests of the American people are taken into account over those of AI companies looking to harvest the work of the American people for the sake of their profits.
