General Comment

AI should be heavily regulated and properly legislated. In it's current state, AI is putting hard working American people out of a job because it is being used as an imposter for real work. AI art is a joke compared to real art, in any form (writing, drawing, graphic design, etc.) and should never be used as a supplement for genuine human effort. Children, and teachers in schools are being bombarded with falsified schoolwork from untrustworthy sources, because people using AI are spreading misinformation about anything and everything, including but not limited to history, science, technology, and people. Not only does Artificial Intelligence need to be heavily regulated in it's commercial use, but it also needs to be regulated in it's cooperate usage, as to not endanger companies or employees, but also what information can be used to train these AI. The dead internet theory is a perfect example of the third issue. There are now parts of the internet wherein different AI accounts on social media will interact with each other, without human input, meaning that the World Wide Web is being corrupted and crowded with bots who are providing nothing good to society. I will attach links to support these claims, but please do your own research. <https://www.forbes.com/sites/danidiplacido/2024/01/16/the-dead-internet-theory-explained/>
