General Comment

Existing copyright law is not an 'unnecessary burdensome requirement'. It is the legal framework which allows creators to protect their work products and be compensated for the use of their work products. Companies producing generative AI should be required to follow existing copyright law. If this prevents them from being profitable, they need a better business model, not a special carve-out to make them immune from the law. The value and benefit of their work has not yet been proven and there is no reason to give them an advantage in the marketplace by letting them ignore laws that restrain others.
