General Comment

AI is a pointless boondoggle that's pushed by big tech companies in order to cut costs, and putting government resources into funding and supporting AI is a waste of tax dollars. Furthermore, the idea that fewer restrictions will help tech companies solve problems with their AI is absurd, and goes against the basic principles of intellectual property. Quite frankly, what's the difference between a tech company downloading copyrighted material to train their AI and a pirate downloading copyrighted material to read or watch?
