General Comment

I have been working as a translator for media for over fifteen years, and over the last decade, the advent of AI translation has begun to encroach on my job prospects. Despite the fact that the work I do is difficult to do with AI, companies are starting to attempt to do directionless machine translation. It creates bad products that they seem to think have no need for editing or review. They create products that do not sell well because their quality is low.

Finally, the opening up of IP for free use for AI would be met with a swift legal response by large companies like Disney, who have already seen the market on parodies of their IP grow. The fact of the matter is that if copyrighted materials were not being used to train these programs, they would not be able to recreate copyrighted imagery and Disney art styles.
