General Comment

To demand the US's dominance in AI is a joke of a statement when AI has not been proven to meaningfully improve people's day to day lives in the first place. To remove what little guard rails we have on an unproven tool that we know steals information, is a massive energy and resource sink, and WILL be used to lay off and undervalue American workers is the exact reason why we shouldn't. AI is exploitative of labor and the corporations looking to use it are making no efforts to use it in ways that could improve their workers conditions. An already poorly treated, undervalued, and overworked workforce. Any economic gains made with AI come at the expense of exploited artists and workers who have not consented to their works being used to train models. Any corporation that moved forward with AI risks lawsuits not if, but WHEN collective groups sue for the unlawful scraping of their works. If they wanted their materials made for free public use, they would have specified. As it stands AI is already rife with risky and speculative over-valuation and should be approached with caution. Do not remove what little guard rails there are.
