## General Comment

I am an Illustrator and Comics artist.

Generative AI technologies like chatGPT, Dall-E, Stable Diffusion and Midjourney are based on the stolen work of myself and millions of other creators. OpenAI has admitted that their technologies would not be operable without access to our work, and has shown no intentions of compensating the creative community.

Additionally, generative AI technologies that generate new imagery can be manipulated to create fake imagery that results in dangerous political disinformation, or else poses a threat to the privacy and security of Americans. The databases these technologies are based on - LAION-5B in particular - contain problematic images and text pairs of sexual assault, child sexual abuse, and extreme cases of violence.

These datasets need to be better regulated, and there either needs to be consent or compensation involved in gathering the work of creatives to train these technologies. We also need to be more mindful about what AI research organizations have access to in order to protect victims of violence and sexual assault. There is too much potential for these technologies to ruin people's lives through creation of false imagery - if companies like OpenAI truly care about the betterment of humanity, then they need to consider the possible ways their technologies can be used for harm, especially against marginalized communities, and build regulations that prevent or mitigate harm.

Thank you for your attention.
