General Comment

I am deeply concerned about the current direction of artificial intelligence (AI). Many of the tools released in the past few years have grown at an unprecedented rate and have damaged the livelihoods of freelance and independent workers. Also, the economic downsides of AI significantly dwarf the benefits (if there are any benefits).

1. ChatGPT cannot think or experience life like a human. Any chat output is simply a nonsensical conglomeration of human-written text, it frequently makes errors, and it can grab copyrighted text without permission or credit (plagiarism).
2. Diffusion models like Stable Diffusion and DALL-E take copyrighted images and art pieces to generate new images. This is incredibly damaging to the livelihoods of human artists who spend their time in school learning the craft.
3. These AI models use an unnecessarily huge amount of water and energy, causing massive damage to ecosystems.

I please urge you to reconsider this plan.
