Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-9259

Comment on FR Doc # 2025-02305

Submitter Information

Name: Amanda Crowley

[REDACTED]

General Comment

If the goal of the plan is "sustaining and enhancing America's AI dominance," then we have an international responsibility to create a sustainable AI system that does not harm humans, which includes the planet we live and sustain ourselves on. Currently, AI is powered by sources that do exactly the opposite.

The only way AI can run harmlessly is with the express consent of the people that created its database - especially image, text and information-generative AI. If you want your citizens to make money for you, they have to make enough money for themselves, and right now AI is directly competing with humans rather than just being a helpful tool for them. That's no way to build "economic competitiveness."

On top of that, if backend AI systems require so many resources that it puts a strain on both the planet and our civil infrastructure, it cannot possibly hold up on a physical level. "Human flourishing" depends on the health of the planet.

If I'm going to be frank, I simply don't trust a government to uphold our "national security" if they act against the best interests of its people.

Why build a tower that's destined to crumble? Where's the legacy in that?
