General Comment

I do not believe that generative AI like what is promoted and used through programs like Open AI, Chat GPT, Grok, et cetera, has any place in our country's future. Generative AI has proven over the last several years that its only function is to inevitably spread misinformation, create fraudulent content or media, and steal the intellectual property of both individuals and any other media property. The idea that generative AI should be immune to regulation and scrutiny is blatantly irresponsible - think of a Senator or other public official having an AI video, one that can be extremely difficult for the layman to differentiate from something real, that depicts a false narrative using a trusted official's image. Generative AI is dangerous, and does not offer enough value in return to anyone but the companies that peddle this technology.

Legislation and regulation needs to be drafted that not only creates a clear distinction between generative AI and the artificial intelligence models that are used in science, medical, and many other fields, but also that holds these generative AI companies responsible for the kind of theft and misinformation they've been capable of for years. This technology will only get more dangerous, without becoming any more useful or desirable to our country. Thank you for your careful consideration of this matter.
