General Comment

Organizations using and training artificial intelligence should be required to document all sources. If source material does not already have a creative commons license, users should be required to request access for use, which may require payment or may legitimately be denied. If violations of use are found, companies should be financially liable for copyright violations. As an educator, I work hard to ensure students understand the value of their ideas and others' ideas. They are required to cite sources and give credit when they rely on the intellectual property of others. It would be completely hypocritical to allow corporations to use others' intellectual property without proper permission or credit when even middle school students know that is wrong. We need strong regulations on use of artificial intelligence.
