As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-3loo-z2hz
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-9280

Comment on FR Doc # 2025-02305

Submitter Information

Name: Alfred Lan

Email: [REDACTED]

General Comment

As someone who had been studying Computer Science in the midst of the boom of AI interest, I am strongly opposed to this proposition.

The emergence of LLM has drastically terraformed the Internet for the worse. The flooding of generative AI images and articles have greatly decreased the reliability of finding factual information online and have lead to mass public distrust. Academics have reported difficulty in teaching aspiring students due to the prevalence of generated fraudulent information. This information is commonly pushed to the forefront of the results of search engines as searches or presented with AI summary functions. There have been a multitude of screenshots of blatantly false information conjured by this function, yet these results are always presented with a cadance of absolute confidence. Misleading users and encouraging the spread of faulty info.

In terms of creative usage, though it is promised that generative AI and LLM could be applicable to creatives' process instead of replacing their roles in design and media fields, studies have shown that when generative AI is utilized as an aid for creative design, it leads to fixation of the generated concepts, and actually limits their capacity to come up with novel ideas.

(<https://dl.acm.org/doi/full/10.1145/3613904.3642919>) This will certainly lead to creative stagnation, as AI models have to be trained on existing material and could only generate results based on what it was trained on.

Even with the promise of regulations for AI that address the concerns of many, such as fair usage, energy consumption, and privacy. These past months of governance has shown me nothing that inspire confidence that the policy actions will be followed through with professional integrity.

Generative AI and LLM do not promote human creativity, nor will it foster those who wish to improve their creative thinking. The motive for it's application is fundamentally flawed, and the damage these technologies have already dealt to the existence of factual information and public trust since its push has been tremendous.
