General Comment

The race for AI supremacy is built on wrong assumptions, and chasing it is to chase the end of the rainbow; it doesn't exist. Industry heads at Microsoft and Apple have publicly acknowledged that generative AI is a technology looking for a use case, built on nothing more than hopes and dreams of what it might do at the cost of tangible losses in the billions of dollars, and now seeks to burn the extant creative industry as well by providing creative artists no recourse for violation of their IP rights.

To sum up, burning the industries that have made American cultural touchstones like books, art, and film just so an unproven technology can make a few people a lot of money before its bubble bursts is not only a terrible idea, it's one that will have lasting damage to the country, far from being the savior of American industry speculators wish it would be.
