General Comment

Generative AI in all its present form is theft of skilled work be it writing, coding, voice work or art. GenAI training on work without consent and/or compensation is also a personal violation another's skill and also violates copyrighted works.

Studies have also shown that it causes skills and critical thinking to decline. The AU government found that ChatGPT has a 40% error rate.

Additionally, its a waste of time, energy and everyone I know its tired of it being shoved into every corner of life, adding nothing of value and heaping on a extra hassle.

It also runs the risk of collecting personal data without consent and could create data breaches or things like HIPPA violations in time.

Finally, it's a lame fad. One that will likely die out and leave problems for copyright law in its wake. Don't give OpenAI any more oxygen. They and others made a bad investment and Americans should not have to lose their work and livelihoods to a fad.
