General Comment

This proposal would give AI companies an outsized ability to steal people's data without compensation and use it for their own profit. This is not only morally and ethically dubious, it represents a massive invasion of privacy and copyright law. Tech elites should not be able to steal and freely use work of artists, writers, engineers, or others who do not consent to their work being used. Especially when it is used to generate a profit for private individuals. That is blatant corruption and any movement in this direction will be beaten down in the courts.
