General Comment

Artificial Intelligence is an extremely powerful and unique tool that can absolutely be used to enhance our lives in a multitude of ways. However, like all great things, it must be properly implemented to truly live up to its purpose.

AI needs to be regulated. There need to be "burdensome" policies. There has to be rules. We cannot allow such massive technology to simply exist and do as it pleases - there's so much danger in that idea. We already struggle everyday with new technological cases and issues at every level: technology is rapidly evolving and it needs to be handled & addressed correctly to prevent misuse & abuse of its abilities.

It would absolutely be devastating to willingly forego the chance to regulate AI and allow it to wreak havoc, simply to alleviate ourselves of the "burden" of doing so. People deserve safe, well-tested, ethically-designed technology. What is the point of technology if it won't properly serve us?
