General Comment

As an American who interacts with technology on a daily basis -- like most people today -- I am honestly unsure why we need to be a "leader" in this current iteration of so-called "A.I." Consumer-facing A.I. is an annoying hinderance at best, putting itself between software users and the functions they actually want to use, and actively damaging at worst, as with ChatGPT and Google's "A.I." search results grossly misinforming their users with frustrating and dangerous frequency. All of these "A.I." models are built on the back of stolen goods, and what would be best is policy to protect the writers, artists, photographers, coders, and other creative individuals AND corporations that hold the rights to this work from exploitation by these large technology firms -- not loosening up copyright or making it impossible to sue these companies for their exploitation, but setting up an efficient system so that these companies can properly LICENSE works to build out their models. Building policy that errs on the side of supporting these tech firms at the expense of so many other sectors of the economy doesn't make any sense; "A.I." is a massive money-loser, while the creative arts make billions of dollars for American corporations both domestically and abroad. Giving this inefficient financial sinkhole of tech preferential treatment just doesn't make any financial sense.

Thank you for the opportunity to voice my thoughts on this important matter.
