General Comment

Given the excessive resource demands required to run LLMs and the real risk of an AI bubble, based on every single developer actually losing money on systems like OpenAI, ChatGPT, GROK, etc., an excessive rush to remove guardrails on development of AI is both dangerous and financially unsound. That one of the primary demands that the companies developing these AI programs is that they should have unfettered access to copyrighted works they HAVE NOT PAID FOR should give everyone pause, as any product or service that relies on the theft of other people's work is not something the American people should be supporting. There are benefits to careful and sensible development of LLMs, but not at the expense of the law or of the rights of artists and writers.
