General Comment

AI needs regulation, not free-reign to trample our intellectual property laws. If a company cannot exist without theft, it's a criminal enterprise, not a business, and should be treated as such. Please see attached files.

White house letter

Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

I am an everyday American who works in the entertainment industry with screenwriters and authors. I have worked hard for years to develop the skills and knowledge to build my business, and have been lucky enough to make a decent living.

The AI systems made by Big Tech companies like OpenAI (Microsoft) and Google threaten to destroy thousands the livelihood of writers and artists by destroying the very concept of intellectual property and violating the core economic principles of our economy with their demand to create special carve outs in copyright law.

AI systems can only be produced by first training on work made by humans. Real, living humans. My unique work, and the work of hundreds of thousands of other everyday American creators was taken and fed into these AI systems without our consent or any compensation. They ingest our work, reassemble it, and then sell it back to our clients – directly competing with us and cutting us out of the marketplace.

Now these Big Tech companies are asking this administration to create exceptions and loopholes to make this practice of stealing American creators' copyrighted work legal precedent. They are suggesting that if a machine ingests and reproduces copyrighted work, it is somehow suddenly "fair use".

They seem to believe that anything and everything on the internet – regardless of who owns it – should be theirs for the taking. They claim that if this administration does not allow them to rewrite the law in this way, it will stifle American innovation.

Instead, it will have the opposite effect. The purpose of American copyright law is to protect the incentive to create and innovate.

If we the American people do not own our creations, and everything we put online will be stolen by Big Tech giants, what will be the incentive to create? If everyday Americans create a new innovative piece of computer code, a new visual design, or a new piece of music only to have it immediately stolen by Google and Microsoft, why bother creating it in the first place? How will we possibly make a living doing these things?

Want to protect American innovation? Protect American creators. **Do not create new copyright exemptions that allow Big Tech companies to exploit and steal**

from creators and everyday Americans without permission, compensation, or transparency.

The AI Revolution is already a grift based on theft and greed. We need regulations and transparency in this space now to protect the rights of the artists whose work is being stolen to feed these models. We should not sacrifice the hard work of hundreds of thousands of Americans and give it away to Big Tech by rewriting copyright law.

Thank you for the opportunity to comment on these important issues.
