General Comment

By giving "Artificial Intelligence" the freedom to ignore copyright protections in pursuit of questionable and vague goals, it will lead to the destruction of the individual artist. If private works, previously protected by legal statutes, can be stolen in the name of "national security" and "competition" with no real yardstick to measure the outcomes, you will destroy the cultural output, not only of this country, but of the world.

Companies will prosper. Individual creators, already struggling against a corporate dominated market, will leave, taking their skills with them.

And for what? To benefit a small group of people who devalue the work of individual authors, poets, artists, and videographers. These "AI" developers demand the right to steal the hard work of others, denying the value of the artists hard work, comparing it to the slop generated by what they deliberately misrepresent as "Artificial Intelligence." This dishonest language should raise significant concerns about the ethical, moral, and financial attitudes of the people seeking support from the government.
