General Comment

Rescinding EO 14110 was a mistake.

AI systems must be developed in a responsible manner. If they are not, this will create a tremendous amount of risk for many existing sectors of the economy, with only speculative upside on new and unproven technology. Many American jobs will be put at risk as a result.

Specifically, allowing for copyrighted works to be used as training data without compensation to their creators, this will not only result in what amounts to legalized theft of intellectual property, but will also chill the creation of new works of a similar nature. As these new AI systems have yet to prove themselves in the ability to create similarly competent works, the end result of this will be the destruction of these industries in which the United States has been a global leader for decades.

If this administration wishes to improve the American economy, as it so claims, it must take care not to destroy what is already working for millions of highly-skilled Americans.
