General Comment

Generative AI has no place in the world, and deserves no legal protections from copyright law. It is trained by scraping content from creators that, in many, MANY more cases than not, did not consent to having their creations used in such a way. It then hacks together what is more often than not an uncanny, &^% result, using disgustingly excessive amount of energy and water in the process. It's a tool that talentless hacks think they can use to replace actual artists with regurgitated garbage made from content stolen from those same artists. The only people advocating for its widespread use are greedy assholes who think artists don't deserve pay. It is a form of theft that produces valueless results. If copyright laws as they are do not allow it to exist, then so be it. Let it die.

Additionally, AI has no place in the future of the US. If AI were put to use in national security, I would bet everything I own that the results would be [REDACTED] disastrous. ChatGPT lies all the time. It scrapes ideas from everything it can find, and a lot of the people it imitates are quite frankly stupid. You can easily convince it to say whatever you want. I once saw the AI overview on google advise someone to kill themselves. All the decent results people get from generative AI have dozens and dozens of worthless, scrapped outputs behind them. I do not trust this technology at all, especially in matters of security.
