General Comment

The current marketing of Artificial Intelligence is that it will be a wholecloth replacement for white collar labor. If Artificial Intelligence is to be trained on copyrighted works and materials, the owners of the used copyrighted works and materials should be owed royalties for said use in a commercial or industrial product. Artificial Intelligence Algorithms are products—not people. Suddenly rendering significant proportions of American jobs redundant (and thus unemployed), with no suitable replacement will do little to make America more secure, it will only serve to hurt the economy at the ground level and destabilize our country. The push for Artificial Intelligence is, in part, driven to eliminate jobs and concentrate wealth in the hands of a small few that will never spend it, effectively siphoning it out of the American economy entirely.

It should also be stressed that the social contract of our country, America, involves the exchange of labor in return for comfortable living. The People, whom provide this labor, are human beings, who will not disappear in a puff of smoke if they are rendered unable to provide said labor. In simple terms, they may be forced into poverty, or worse.
