General Comment

The use of AI generators is unethical to the highest degree. As an artist, a writer, and a human with dignity I believe that we as individuals all have the right to own and legally protect what we have crafted from years of practicing skills, paying for programs and lessons and degrees, and put our hearts, minds, and passion into.

I can only hope that the government is willing to understand the grave implications that 'winning the ai race' has for the millions of humans it will harm in its wake.

Already these corporations have made it clear, and publically stated that their product cannot work without mass theft of data taken unwillingly from American citizens. Already we know that the power draw needed for these unthinking computers to make guesses based on scraped data and pixels is immense and harmful to the environment and some of the most vulnerable communities living here.

I beg for my rights to the work I have made, and for the rights of everyone everywhere, and I will stand against the already unlawful and unregulated use of the personal data of all Americans and all the world no matter how or when this issue arises. There is no fair use if consent was never even an option. There is no fair use if we cannot petition for the removal of our data from generators.

Please, do not allow the draw of faulty tech to forever ruin the creative spark of our people, and the creative industries of America.
