General Comment

Hello, I firmly believe that AI does NOT hold a future in the US. Every day, I have friends, family, and loved ones who are losing their jobs due to being replaced by AI technologies that do their jobs worse. My mother, while she still holds her career, has found AI to be nothing but a hurdle for workplace productivity, as the sudden enforcement of AI tools have caused numerous errors in important documents that impede workflow rather than help it. I am certain that more money and productivity has been lost trying to implement these tools than it has saved businesses any.

Widespread use of these tools hasn't been helping us, it has been hurting us Americans. We don't want big tech to force AI down their throats, much less allow them to steal our hard work for use in their machines. Giving them less copyright protections will only hurt those who create and work hard. We deserve to be able to have the right to not want anything to do with these systems, we should have the freedom to choose whether or not we want our work to be in AI algorithms, and we want transparency and clarity from big tech in their use, intention, and implementation of these systems.

Art, writing, and music matter just as much as anything else. Do not give robots and big tech the ability to supersede human creation.
