General Comment

From: Jack Ratti

Profession: Freelance Artist and Animator, Online Influencer

Giving AI companies, Tech Giants like Google and Microsoft, Apple and Meta the rights to use everyday American's art and content posted online is something I am adamantly against. Generative AI steals off the back of hardworking and well meaning people. AI systems need the data of normal people to even be able to function and most have acquired their data without any sort of permission or compensation. If companies are allowed to steal from Americans online without consequence then it will be a sad day for our country and for artists every where. Please protect copyright and the livelihoods of millions of people. Unfettered AI would be a major double standard and show the absolute disregard corporate america and our government has for its every day citizens.

Because of this, I'm asking that this administration's AI Action Plan should focus not on giving away creator content to Big Tech companies, but rather on ensuring a fair marketplace with competition:

First, the government should ensure that creators and everyday Americans give effective consent, so that we can decide when and where our work is used by AI systems.

Second, the AI Action Plan should encourage a robust licensing marketplace, so that the incentive to create for small businesses is preserved. Our work has immense economic value, so the value generated by that work should accrue to the original creators, not just Big Tech.

Finally, the AI Action Plan should require transparency from Big Tech companies, requiring them to disclose what material is in their training datasets, and label what content is AI generated.

I am not anti-technology or anti-AI. I am consistently impressed by the capabilities of these AI systems, and find them incredibly useful for many things. But we should not sacrifice the hard work of hundreds of thousands of Americans and give it away to Big Tech by rewriting copyright law.

Thank you for the opportunity to comment on these important issues.
