K Nixon
Philadelphia, PA

I am an independent freelance illustrator and have been for five years. I've been working towards bigger goals, but AI programs are a major hindrance. Not only do they affect me, but they affect artists with a larger online platform, and artists working in the professional animation, video game and illustration industry.

Google, Microsoft, Meta, and so many other big tech companies with AI systems and investing in AI are directly harming artists big and small as all of them rely on copyrighted data for training. To take the artworks of an artist-who spent their whole lives developing their craft, likely went to school to hone their craft, and took that years of learning and skill and put it into the time it took into said artwork-and use it to train data so that artist can be replaced is abhorrent. It is cruel to put that artist out of work. It is cruel to replace artists. It is cruel to replace human creativity for the sake of saving money.

Copyright is meant to protect the creations of artists. If artists do not own their works, what is the point of any copyright? Who owns anything? This is not just deregulation, it is theft. It is letting big tech companies get away with theft from individual artists and their legally owned, copyrighted artworks.

This ruling could ruin the meaning of copyright in it's entirety. Do Not Let Tech Companies Take The Copyrighted Works Of Individual Artists To Train AI.

Do Not Let AI Steal Art.
