General Comment

The copyright act of 1976 ensures that creators have the rights to their own tangible content and have those rights for their life time plus 70 years. This means that creators such as artists automatically have a copyright on their own creations and are able to use and share those works in anyway for their life time plus 70 years. Artists right to their works copyright is infringed and harmed by generative AI programs that use artists creation's unlawfully with out permission to train AI. Many artists need to be able to have platforms in media such as social media and social settings but AI is taking advantage of these artists creations that are shared to the public. Social platforms such as instagram and meta have been caught secretly stealing data from their platform's users such as messages and photos, many especially coming from artists, to train AI which again is not only infringing on such copyright laws here in America but as well goes against our right to privacy. Instead of training AI, how about we protect our creators, our media, our reporters, and our data from being used illegally and infringing on basic copyright laws that have been in place for decades.
