General Comment

I am an individual artist. I have no experience in political matters, or scientific ones really. In some ways I could be considered a nobody, but I believe I speak for a large plurality of silent citizens as I type this comment.

Artificial intelligence has been an existential headache for those interested in artistic pursuits. It allows corporations and malicious actors to capitalize on hundreds, probably thousands of other peoples' work without a scrap of compensation, flooding social media with cheap AI slop that devalues the human experience. I won't deny that artificial intelligence has some real upsides, but totally unrestricted usage of that technology will harm more Americans than it will help.

AI has been used as a tool for propaganda and misinformation. It allows nearly anyone to present information in a way that the general public cannot easily identify as real or fake. Its cheapness and ease of reproduction ensures that every corner of the internet that allows AI-produced content has inevitably been flooded by it. The idea that the American government would even entertain embracing this kind of large-scale delusion sickens me, as it should anyone who has any bit of respect for the life of the average citizen.

Few will benefit more from artificial intelligence than those who are already rich and in power, who see the technology as an excuse to cut out jobs in the lower and middle levels. Those same people will likely grant themselves special privileges to ensure their own existence isn't endangered by AI. I have to ask, if artificial intelligence can be relied on to handle such things as data analysis and the creation of art, why not replace lawmakers with machines? Surely a sufficiently advanced AI could handle presidential duties more logically and efficiently than any human ever could. If AI is embraced, we either end up with an America where machines run the entire country from head to toe, or we end up with an America where the strong grow stronger and everyone else is left to starve. To believe that either future is desirable is frankly a stupid [REDACTED] belief.

Once again, I am not anyone important, but neither are most of the millions of Americans whose livelihoods could be negatively impacted by this approach to artificial intelligence. Millions of people who aren't aware that their government is considering advancing the interests of AI over feeding its own people. If any human is reading this message, and I sure hope that this is the case, I want you to consider my words as if they were coming from a senator or a representative of the House. Human perspective matters when it comes to the ruling of a country, and the current advancement of AI does not consider the perspectives of those outside of a very slim minority. I doubt the current administration of the White House cares about any member of the common people, but to anyone else, this should be a time to realize just how miserable our future is starting to look.
