General Comment

Granting OpenAI this level of protection is utterly against the principles of capitalism. Not only does it destroy copyright protections that millions of jobs rely upon, but it would grant a massive advantage to one company without appropriate consideration.

Furthermore, there is no evidence that LLMs can significantly exceed their current abilities with more information, and even if they could, the amount of information in the world is finite: it would plateau again, and with no way to further improve. Unlike the human mind, LLMs cannot create, only reproduce what they've seen before. Human labor is ultimately less expensive and far more environmentally friendly.
