## General Comment

Allowing AI to steal human creations without compensation or the protections copyrights provide is going to kill creativity and innovation in this country.

We are pouring millions of dollars and destroying our legal protections for a tech oligarch boondoggle that many times have turned out to be scams using overseas human labor to create a faux experience of AI, and it will be as much of a pointless waste as investing in cryptocurrency.

Waste of effort, waste of water and power, waste of money, waste of breath trying to make this insane dream a nightmarish reality. Also with the CHIPS act being axed by the administration, it will cost ten times more to try and meet this demand for physical tech infrastructure and data centers when we cant make our own microchips and have to beg China and Taiwan to let us buy them at inflated trade-war rates now.

Take that AI money and put it back into CHIPS factories, and we will be ten times stronger with real physical manufacturing rather than another useless AI program for people's phones.
