General Comment

The restrictions put on AI companies are not burdensome, they are basic intellectual property law, and if individuals and other sectors are expected to respect it, then so should AI companies, regardless of their models. There is no necessity to carve out a special exemption, one that will be abused to unfairly increase their presence in markets and aspects wholly unrelated to security, and they have demonstrated in the past an inability to "silo" said data even if they promised to do so. This is no different than saying Tesla can steal technology patents because "their cars are important to the government". It is misusing the government to show favoritism and tip the scales of the market, which will draw costly and time-consuming lawsuits by their competitors, as well as everyone who has had their intellectual property used without explicit consent.
