Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-9453

Comment on FR Doc # 2025-02305

Submitter Information

Name: R M

General Comment

As an American constituent, I am opposed to the proliferation of AI in this manner. Generative AI steals from hardworking artists. It sources its 'training' material from others' work towards the end goal of replicating, improving upon, and replacing that work without human input. It has been used already to replace the paid labor of artists. It will harm our economy, its unregulated copyright violations threaten to destroy the sacred institution of art, and it consumes a massive amount of power that working Americans cannot afford to lose.

In addition, the overreliance and overuse of this technology has observable negative effects on education and critical thinking skills, not to mention the quality of work it produces. It is a cheaply made, consumptive and expensive attempt to replicate human work without paying humans to do it. It will destroy swaths of jobs to replace them with small teams of corrective coders and whatnot, and even if it was good at its job, or if it eventually improved--nothing should replace humans that does not work to improve their quality of life.

AI, as it is now, and as these proposals plan to proliferate it, is an unregulated danger that will disservice and dispose of American livelihoods. I cannot oppose it enough.
