## General Comment

I am a writer, healthcare worker, and first responder.

So-called "A.i." technologies like ChatGPT and Dall-E are based on the theft of my work and the work of millions of creators like me.

So-called "A.i." text technologies like ChatGPT constantly present false information as fact, spreading dangerous ignorance and disinformation. This is of particular concern to me as a person who works in healthcare.

So-called "A.i." technologies like Dall-E allow the creation of fake imagery that enables dangerous political disinformation.

So-called "A.i." technologies like ChatGPT consume massive amounts of energy and water and endanger the environment.

My conclusion is that the current implementation of these technologies is immoral and unethical and violates copyright law. These technologies should not be encouraged, aided, used, or subsidized by the government in any way.

One very specific suggestion is that a so-called "A.i." company should be required to obtain the permission of every single creator for every single work it wants to use before it uses it, and the company should be required to immediately remove all work for which it do not have such permission from their databases

Thank you for your attention.
