General Comment

Claims that the rate of AI development is a national security concern – and that OpenAI’s requests are an appropriate approach – need to be taken with extreme scrutiny. The purported benefits of AI (specifically AGI) for human prosperity and its economic profitability are dubious, based more on speculative outcomes than its current practical implementations. If nothing else, DeepSeek’s ability to compete with OpenAI using significantly less energy in model developing should put into question whether access to copyrighted works is truly necessary, or if OpenAI is reliant on convenient solutions.
