General Comment

As an architect who has utilized artificial intelligence programs and seen their application in the workplace, I am deeply troubled by allowing artificial intelligence companies to operate through the gutting of copyright protections. Without the stolen work of others, artificial intelligence can simply not operate and AI companies have continued to refuse to play by the same rules that human artists and creatives have for the past century. Additionally, allowing artificial intelligence to operate unimpeded will risk thousands of American workers losing their jobs and will allow large corporations to utilize content from the internet that is often poorly fact-checked and improperly cited. The US is known for its cultural exports and with a country loosening its copyright protections for the sake of "artificial intelligence advancement," we will find our creative works failing to resonate with domestic and international audiences who yearn for the handmade, the raw, and the human. Work generated by artificial intelligence is not creative, it is derivative, and in order to be a world leader in the 21st Century, the United States needs to focus on American-made ideas and innovations, not those churned out by a computer that is regurgitated from previous ideas. If President Trump wants to promote human flourishing, economic competitiveness, and national security, he will protect the copyright system in place and encourage the American people to think for themselves and not allow tech companies to control the information in this country.
