General Comment

My name is Heather-Ashley Boyer. I am an American citizen, a SAG-AFTRA actress, a film producer, and an AI policy advocate based in Los Angeles. Over the past five years, I have been closely following the development and progression of AI, long before ChatGPT was part of the public zeitgeist. During the Hollywood strikes of 2023, I addressed over 9,000 actors on the serious risks of AI and the very real threat it poses to jobs across all industries. AI is fundamentally unprecedented in its nature and the top research labs are gunning to have it be far more than just another tech tool. Experts who have developed it and are most qualified to speak on its true nature say it is better compared to a new species, as opposed to merely another tech tool. This presents major risks and threats to the survival of humankind.

Due to the inherent risks that come with developing AI, we must treat this as we did nuclear weapons. An AI Action Plan needs to include a CERN for AI as well an international agreement to limit the development of advanced AI including AGI, ASI (superhuman intelligence), and provide whistleblower protections at the AI labs.

I urge policymakers to listen to academic experts on this issue and not the companies who stand to gain massive amounts of money, while gambling with the very survival of the human race.

Sincerely,

Heather-Ashley Boyer
