General Comment

Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

I am a librarian working in the field of metadata generation and systems administration. Based on what I have read regarding this proposal, I am concerned about the capacity for these proposed carve-outs for copyright law to threaten the livelihoods of thousands of artists and musicians in the United States.

It must be understood that the works used in AI datasets were created by human artists and musicians -- without consent or any compensation in this initial build process. Companies such as OpenAI and Midjourney ingest this work, create facsimiles of it, and then sell it back to clients -- directly competing with artists and cutting them out of the marketplace. This does not constitute fair use. These artists deserve compensation for their work.

To protect American artists and musicians, usage by AI companies should be opt in only, and these companies should pay licensing fees for any material used. There are opportunities to build a system that allows artists to create works specifically for AI datasets, and for both the artist and the company to benefit.

Thank you for the opportunity to comment.
