General Comment

I don't know what more can be said this matter.

I wish more people, especially those who are reading this right now (or hearing this, on the off-chance it's being read aloud), were able to grasp the gravity of this situation right now.

I wish I didn't have to become some instant expert on the nature of "artificial intelligence", much less the Executive Orders pertaining to it, just so I can form the exact words needed to reach the hearts and minds of those in power to convince them to avert yet another potential crisis in the making.

I fear I do not, but I am compelled to try.

All forms of artificial intelligence (or "AI"/"A.I.", for short) holds the potential of being developed for the benefit of this country, not just an entitled few, but it can't be done with reckless abandon, with no regard for "how the sausage is made". I have heard and seen too many stories of how generative-AI developers pillaging countless media archives to feed into their machines to regurgitate and vomit out an rough amalgamation of whatever passes for imaginative to the unimaginative. Time and time again, I am a witness of one insult to life after another, each one a product of generative-AI. Pictures of dead men, trying to pass off for the genuine article. Fragmented noise pretending to be music. Sandwich recipies containing the process of producing mustard gas. In a sea of creative frauds and technological hucksters, I've found only one actual productive use of generative-AI: fast-tracking cancer research. And this is the stuff that people have been able to get away with WITH the barriers Executive Order 14179 wants removed.

There's nothing progressive, nothing productive, about unchecked development on artificial intelligence. It's inefficient, and a waste of resources, both physically and digitally. I'd like some assurance that AI can be innovated safely and securely, and I need a lot more than "Trust me, bro."
